ducasse, It's an UEFI system. I used ubuntu-16.04.3-desktop-amd64 and 32 bit UEFI with Windows 8.1. Windows is installed. After the installation, when booting I get to windows bootloder and not the grub. ducasse, I don't know what's wrong... Krishnandu, after you installed win, did you update-grub2? ioria, Yes, it shows all the ubuntu OS and my Windows 8.1. 'luefi UEFI is a specification that defines a software interface between an operating system and platform firmware. It is meant as a replacement for the BIOS. For information on how to set up and install Ubuntu and its derivatives on UEFI machines please read Krishnandu, check the link ioria, Even I tried that too, ,but nothing happens... Krishnandu: you have both windows and ubuntu installed on separate devices? Krishnandu, what exactly you did? you use the uefi install mode? Krishnandu: this is all you did, and this is what happened: boot from ubuntu installer -> install ubuntu -> reboot -> at boot time, select ubuntu -> get to the grub screen -> select ubuntu from there? ioria, Yes, I used both ubuntu-16.04.3-desktop-amd64 and ubuntu-16.04.3-desktop-i386. Both worked and installed successfully. After the installation, when booting I get to windows bootloder and not the grub. Krishnandu, so you installed uefi tomreyn, Yes, Exactly, Krishnandu: what's the output of "ls -ahl /boot/efi"? ioria, Yes, I installed it. Krishnandu: that's an efi system, 82157476af
